# Basket Picotee

After several years of breeding the Hanging Basket Picotee — an entirely new color has been achieved.

They have been selected while in flower and are offered in pastel mixtures such as pink, rose, salmon and apricot.

Very beautiful and a welcome addition to the Tuberous Begonia garden.

PRICE — Pastel Shades

Large \$1.50

Medium 1.00

# ROSE FORM

Individually selected while in bloom — resembling huge roses and offered in all colors of the Double Camellia type listed on Page 4.

## CHOICE SELECT TUBERS

Each year when our seedling plants are in bloom, we select and mark the finest flowers. These are above average in size, form and color and are offered to those who wish to start with show plants or add to a collection. They are selected from the four main types of Begonias — the Double Camellia, Ruffled Camellia, Camellia Picotee and Hanging Baskets. Colors and types may be assorted.

PRICE EACH DOZ. 100 Large \$1.00 \$10.00 \$75.00 Medium .75 7.50 58.00

## PICOTEE TYPE

The Picotee type is characterized by its contrasting colors. Resembling large camellias or roses, this interesting type is becoming increasingly popular every year due to the wide variety of new shades being developed. Generally these flowers are either daintily edged or heavily bordered with a contrasting color, but they may also be strikingly mottled or spotted.

COLORS: Pink, Rose, Apricot, Red, Salmon.

### TUBEROUS BEGONIA SPECIAL

We have received so many good reports on the success in growing this size tuber that we are pleased to continue this special. These are not the small tubers offered in some specials but a full  $1\frac{1}{4}\cdot1\frac{1}{2}$ " in diameter that produces nice strong plants with the same quality large blooms as the larger size tubers. Larger tubers produce larger plants with more flowers although the quality and size of blossoms are the same.

Available in the four main types of Tuberous Begonia Double Camellia—Page 4, Picotee and Ruffled Camellia—Page 5 and Hanging Baskets—Page

30 tubers \$5.00

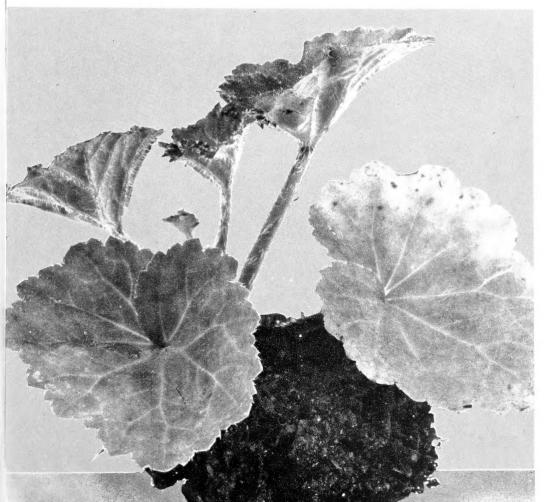

## Seedling Plants

Our seedling plants have improved and become more beautiful each year.

Planted in May, they will bloom for you in July and are at their best throughout August and September and will stay in bloom until frost when they go dormant. The tuber should then be lifted, dried and stored.

Ready May 1 to June 15
PER DOZ. PER 25 PER 100
\$3.50 \$6.25 \$24.00

# HOW TO GROW TUBEROUS

Tuberous Begonias grow from seed and from tubers. They may be purchased in either of these forms or they may be secured as plants produced from seeds, tubers, or cuttings. They are easy to grow, and with reasonable care will thrive in most climates.

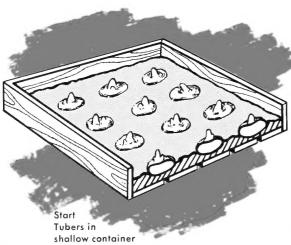

#### FROM TUBERS

The size of the tuber does not indicate the size or quality of the flower; however, the large tuber starts easier and will form larger plants. The natural dormant period of the tuber is the winter season, and in the spring the tuber will form sprouts.

### SPROUTING

It is very important that a sprout appear before the tuber is planted.

You may move your tubers to a warm, dark place to get earlier sprouting. Placing tubers on damp soil or peat moss is not advisable as they will sprout without this dampness and with less danger of loss.

## **PLANTING**

The sprouted tubers should be placed in shallow containers (nursery flats are ideal) of a mixture of leaf mold and sand, or of finely divided reed peat. They should be completely covered, leaving only the tips of the sprouts showing, as the roots develop from the top and sides of tubers. After planting in the flats, the tubers should be well watered and should not be watered again until they show dryness. It is important to keep the tuber in the

flat until the roots are well developed. The plant may attain four or five inches of growth before they are moved. A good root system will insure a finer plant.

### POTTING

For the soil mixture used in the pot, we use seven parts of rotted leaf mold mixed with one part of barnyard manure and three parts of sandy loam. These proportions may vary depending on the difference in soils. In planting the tuber or the seedling in a pot, a piece of crockery is placed over the opening to allow proper drainage. The pot is filled one-third with the potting mixture, then two tablespoons of Full Bloom are sprinkled over this. The fertilizer is then covered with potting mixture and the plant is placed so the roots are about one inch above the fertilizer. In choosing the pot, it is well to allow room for the growth of the plant. A large tuber requires an eight- or nine-inch pot.

After potting, the plant is lightly watered and is not watered again until the soil shows dryness. Too much watering may cause the soil to sour and cause the loss of the tuber.

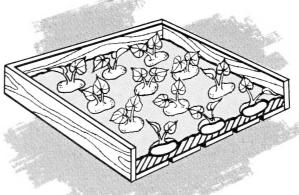

As the plant develops, the watering will become more frequent. A repeated simple rule is to "water only when the soil shows dryness." For a longer blooming season with

better flowers, the feeding of fish emulsion should be used several times, at two-week intervals.

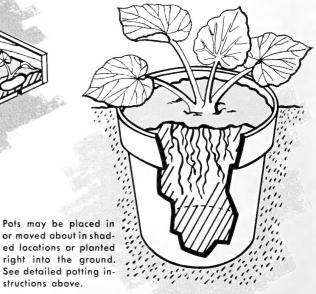

The flowers will continue to bloom from June through October. As the plant starts to die in November, the water should gradually be taken away. When the plants are quite yellow and falling apart, the tuber should be dug, washed and put in the sun to dry. The stem should be removed, but not until it has dried sufficiently to pull out easily, as the tuber may be injured. When the tuber is thoroughly dry, it may be stored in a cool, dry place for the winter. In years of early rainfall, there is danger of losing your tubers by rotting. In this case, dig and place the plants in trays until they are sufficiently cured and a slight pull will remove the stem from the tuber.

## FROM SEEDS

You may sow your seed from December until March, but the best results are obtained from those planted in February. This should be done in well-drained flats containing an inch and a half of well-decayed leaf mold. The seeds are watered with a light spray, covered with glass, and darkened with paper until germination. In a temperature of 60 to 70 degrees germination will take eight to ten days. As soon as the seed shows small white specks, the paper should be removed. Two or three days later small plants will show. The glass

When the plant has reached 4 to 5 inches of growth, its root system is strong enough to allow transplanting or potting. Pots may be placed or moved about in shaded locations or planted right into the ground. See potting instructions above.

To avoid the growth of weeds and fungus, it is advisable to sterilize the soil with steam or soil fumigants before planting, and to water with sterilized water until the third leaf shows on the small plants. The plants may then be watered with fresh water for fifteen to twenty days before transplanting.

### TRANSPLANTING

A good mixture for transplanting contains two parts of well-decayed leaf mold to one part of top soil, with a light application of well-decayed manure. At first the seedlings are planted one inch apart, and when they become crowded they are transplanted again. In five to six weeks they will be ready for potting or planting in the garden.

In Garden Planting, one should not "over do" the soil preparation. Such practices as digging trenches and filling them with loose leaf mold should be avoided. The most desirable soil is fairly loose but yet has sufficient body and nutrients to allow the plant to develop. A sandy soil requires the application of humus, whereas heavy soils require sand and leaf mold.

Begonias can not stand direct sunlight during the day (in most areas), therefore it is well to choose sites that afford the early morning sunlight or the late evening sunlight. The more sunlight the plant can receive without burning, the more flowers may be obtained, and the

larger the blooms. The Begonias should be planted in order that the point of the leaves faces the observer. This is known as facing the plant, and it is important if one is to see the bloom well.

After planting, Begonias require a minimum of watering during the early stages of growth.

#### PINCHING

To attain large flowers on the standard or upright type, all shoots should be removed except one. This is accomplished by breaking off, at any time, the growth that develops from the tuber. If you desire to make cuttings, allow the growth to develop two to three inches high on the extra shoots, then cut off at the tuber with a sharp knife, and then by planting in sand they will form their own tuber in the fall.

On the hanging basket variety started from tubers, all the sprouts should be kept and the crown pinched from the first main sprout when they attain four or five inches of growth. This induces the development of the lateral growth, and the growth of new sprouts. Lateral sprouts should not be pinched; they may be pinched before potting or soon after potting. Do not pinch the plants of the seedling hanging basket type the first year, as this does not allow time for flower production, and does not allow the tuber to develop properly.

For a full basket of seedlings, it is best to put from two to four plants in each basket, depending on the size of the container.

See our Hanging Basket House illustration on the back cover of this catalog to get the color effect of a planting of hanging basket begonias.

## DROPPING OF BUDS

Begonias, although hardy and easy to grow under favorable conditions, are affected by overwatering, too dense shade, and lack of air, and as a result, will not bloom properly. They require fresh-air circulation, and will drop their buds and flowers in a very few days if kept indoors. If the center buds fall before they open, it is usually a sign that the soil is kept too wet. Care should be taken to avoid overwatering. In the cooler coastal areas, the use of peat moss should be avoided or used sparingly. If your plants become tall and spindling, with large leaves and few flowers, there is insufficient light. This may be remedied by removal to a less-shaded location.

### BEGONIA MILDEW

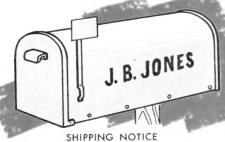

Although the mildew problem seems on the way out—precautions still should be used to avoid the possibility of mildew appearing on plants.

Dusting sulphur is the best control for begonia mildew and it is best to use this regularly every two weeks up to blooming time. By using a duster and applying lightly, the sulphur is hardly noticed on the plants. After plants begin to flower, you should not use sulphur as you will burn the flowers. By keeping plants clean and healthy there is less chance to contact mildew.

If mildew appears after plants are in bloom, any of the following materials should be used as instructed on the bottle: Orthocide Fungicide, Doo Spray or Calsul. These materials show the least burn to flowers and are very effective.

Copo Tox 10 is a good preventive of mildew as well as the best control of stem rot with no flower burn.

"Gosh — It's cold outside!"

On shipments to the colder climates—we will make them in March at the proper time for planting.

Customers wishing their order in the early part of the year will accept shipment at their own risk.

# Antonelli Hybrid

### BLUE RIBBON WINNERS FOR SIX STRAIGHT YEARS AT CALI-FORNIA STATE FAIR

With just a little care your Gloxinias will reward you with beauty for many months of the year. The important requirements are light, warmth, a good pot mix, and to be kept free of insects.

## (New Hybrids)

## NEW INTRODUCTIONS

LA RUE (1956) — Large flowers of the most brilliant red yet offered in the large flowered variety.

BLUE HEAVEN—The latest achievement in the blue color range.

KISS OF FIRE—Brilliant, all-scarlet—late-

blooming—short, erect flowers on a compact plant. Our most popular Gloxinia. Kiss of Fire produces small tubers—large grade is  $1\frac{1}{4}$ - $1\frac{1}{2}$  inches in diameter.

RUBY — Wavy bright red flowers — light pink back — early-blooming, upright

flowers. Large tubers,  $1\frac{1}{2}$ -2 inches in diameter.

STAR DUST-Huge ruffled burgundy.

VELVET QUEEN—Very large ruffled violet red flower. One of our finest introductions.

TUBERS—Gloxinia tubers may be started as soon as you receive them. To encourage root growth and to avoid overwatering, start tubers the same as Tuberous Begonias in flats or in small 4- or 5-inch pots. Tubers generally give several sprouts. To achieve a well-formed plant with the largest flowers, it is important to remove all but the main shoot by breaking or cutting off at the tuber. These shoots may then be started in sand or your regular rooting media. After rooting, treat the same as seedlings.

SEED—Gloxinia seed may be started by the same requirements and soil mixture used for Tuberous Begonias or African Violets. Either method is satisfactory. Care should be taken not to keep soil too wet, and that foliage is dry during the night.

BUD BLAST—This is usually caused by attack of thrip. Other causes are over-feeding with a chemical fertilizer during the blooming period, and wetting the buds during very warm days with cold water. Remedy is simply correcting the cause—

keep the plants clean, feed with organic fertilizer, and care in keeping flower stems dry during very hot days.

POTTING—Our pot mix consists of twothirds well-decayed leaf mold, one-sixth loam, and one-sixth steer manure. African Violet mix is satisfactory. Large tubers need a 7- or 8-inch pot, medium tubers 6- or 7-inch pot, using the same procedure as directions given for Tuberous Begonias. PESTS—The most common pests are thrip and aphids, controlled easily by several insecticides made for that purpose.

## **ACHIMENES**

ADELE DE LA HAUTE—Lavender rose.
AMBROISE VERSCHAFFELT—Lavender.
ANDERSONI—Medium blue.
CAMILLE BROZZONI—Lilac tint—brown dots.
CRIMSON GLORY—Lavender orange.
DIADEM—Purple red.
FRANCOIS CARDINAUX—Lavender.
GRANDIFLORA—Purple red (trailer).
HARRY WILLIAMS—Purple red (upright).
JEWEL—Lavender blue.
A. LONGIFLORA—Medium blue.
MASTER INGRAM—Carmine red (trailer).
MEXICANA—Dark blue.
PULCHERRIMA—Purple.
ROYAL PURPLE—Royal purple.
VENUSTA—Dark purple.

Each \$ .25 — One Variety 12 for \$2.00

CULTURE—Achimenes do best under the same conditions we grow African Violets. They desire a very loose mixture—a night temperature of 60 degrees, avoiding strong light. Started indoors they may be removed to a lath house or shady spot outdoors when they commence to bloom. They do best by planting 6 to 12 tubers in a 6-inch pot, keeping varieties separate as they multiply terrifically. Beautiful baskets may be obtained by planting dozens of the tiny tubers in wire baskets. Achimenes, no doubt, are the easiest of all Gesnerias to propagate—any part of a leaf, stem, or tuber may be broken off and they will start readily. Tubers resemble tiny miniature pine cones.

## STREPTOCARPUS (Cape Primrose)

Streptocarpus is easy to grow and will do well outdoors in a shady, sheltered location, in any good loose soil, or as a house plant.

As a pot plant it is best to use a Gloxinia or Violet mix (two-thirds well-decayed leaf mold, one-third sandy loam). Plants bloom in about four months and blossom continuously. As plants become larger, it is not uncommon to have ten or twelve blooming spikes at one time. Like other Gesnarias, you may propagate by leaf cuttings or divisions; however, growing from seed is the most satisfactory. Colors range from pure white through pink, rose, salmon, blue, to a deep violet. Plants are shipped in crates of twenty-five—twelve plants may be ordered in conjunction with Tuberous Begonias or Gloxinias.

12 for \$3.50 25 for \$6.25 • 100 for \$24.00 Delivery: May and June

## FUCHSIA CULTURE

Fuchsias are a shade-loving plant. They are easy to grow and respond readily to a little care; even a small plant will bloom profusely in six months. They take morning sun, but will not do well in full sun except directly on the coast.

SOIL—For pots or baskets, an ideal soil mixture is as follows: Two parts oak leaf mold, one part soil and one part steer manure. Tuberous Begonia pot mixture may also be used with excellent results.

WATER—The soil should be kept moist at all times, but not soggy wet. Too harsh a water pressure directly on the foliage sometimes causes yellow leaves. The reason for this is that the leaf stem cracks slightly, encouraging a new leaf to start and push the old one off.

FERTILIZING—For pots and baskets, we use Full Bloom fertilizer in the bottom third of the potting mixture. Lucky Gardener fish emulsion is fed regularly every two weeks throughout the growing season. These two fertilizers are used exclusively in our nursery for all our fertilizing schedules. We highly recommend them for use on all plants.

PESTS—Pest control is easy for fuchsias. Use a spray with an oil base as buds begin to appear, and use it regularly. This will control aphis, white fly, mealy-bug, thrip and red spider.

- ARISTOCRAT Creamy white, pale rose tipped white sepals.
- AVALANCHE—Double white.
- **BERNADETTE**—Double blue violet, pale rose sepals.
- BERKELEY (1955) Double rose marbled, rose sepals.
- BLUE WAVES—Double deep violet, neyron rose sepals.
- **BOUDOIR** Double mauve, blue creamy sepals.
- **BRIDESMAID** Double lilac, white sepals.
- BUNKER BOY—Double, near white at base, shading to geranium-like at edges.
- BURGUNDIAN (1955)—Double burgundy red, carmine sepals.
- CATALINA Double white, crimson sepals.
- CATHY MILLER—Soft orchid, bright red sepals.
- CHINA DOLL Double white, large red sepals.
- CRINOLINE Double clear pink, sepals rosy white.
- DON PERALTA—Semi-double large, rose shade, long tube, rose sepals.
- **DOROTHY LOUISE** Double pale pink, pink sepals.
- EASTER BONNET (1955) Double rose pink-frosty pink sepals, tipped green.
- FANTASY—Semi-double pale orchid pink, white sepals.
- FASCINATION Double rose pink, pink sepals.
- FLIRTATION Semi-double orchid rose, pink sepals.

## FUCHSIAS

- FRENCHI—Double rose mauve, salmon pink sepals.
- GAY PAREE—Double purplish pink, sepals white, flushed carmine.
- **GRAY LADY** Double pale grayish blue, rose sepals.
- GYPSY PRINCE—Deep violet purple, bright red sepals.
- GYPSY QUEEN—Double rose mauve, red sepals.
- HAPHAZARD Double dark purple, scarlet sepals.
- HAYWARD—Double deep violet purple, red sepals.
- **HOLLYDALE**—Double cattleya orchid, rosy sepals.
- **HIS EXCELLENCY** Double violet purple, white sepals.
- **HONEYMOON**—Semi-double rose blue, red sepals.
- INNOCENCE—Semi-double white, rose sepals.
- JAMBOREE (1955) Huge double carmine-carmine sepals.
- JOAN OF ARC—Double clear white, white sepals.
- KINGS RANSOM—Double deep purple, white sepals.
- LADY ANN Double purplish blue, outer petals phlox, white sepals.
- LUCKY STRIKE Double blue and rose, light pink sepals.
- MISSION BELL—Single, bell-shaped purple, red sepals.
- MISS FRILLS Double orchid lilac rose pink sepals.
- **OLD SMOKY**—Double rose with smoky cast, pink sepals.
- PATTY EVANS—Double blush white, pink sepals.

- **PETITE**—Double lilac blue, pale rose sepals.
- PINK FAIRY—Double pink, pale rose sepals.
- PINK QUARTET—Double pale pink, pink sepals.
- ROSE CHIFFON (1955)—Semi-double rose, rose sepals.
- ROSE OF MONTEREY—Double rose, pink sepals.
- ROYAL PURPLE Double purple, scarlet sepals.
- SAPPHIRE Double purplish blue, frosty pink sepals.
- SANTA CRUZ—Double red, red sepals.
- SHY LADY (1955)—Double creamy ivory, ivory white sepals.
- SLEIGH BELLS—Single large bell-shaped, all white.
- SNOWBALL—Double, all white.
- SOPHIA—Double purple, waxy white sepals.
- STORM KING Double white, pink sepals.
- TELEVISION Double deep orchid, white sepals.
- TITANIC—Double rose purple, carmine sepals.
- TUTU—Double pale aster violet, white sepals.
- UNCLE CHARLEY—Semi-double lilac lavender, rose red sepals.
- UNCLE JULES—Double blue violet, crimson sepals.
- VIENNA—Double lilac, blue sepals.
- VIOLET GEM Double deep violet, carmine sepals.
- YONDER BLUE—Double deep blue, rose red sepals.
- YULETIDE—Double white, pink sepals.

## TRAILING FUCHSIAS

- ANNA-Large double, all red.
- AUTUMNALE—Single purple, bronze yellow leaves.
- BACHELOR GIRL—Double pale mallow, white tube.
- BLOOMER GIRL—Large bell-shaped flowers, pale pink, veined carmine.
- BLOSSOM TIME—Large single soft pink, white tube.
- BLUE BONNET—Single light blue, red sepals.
- BLUE PETTICOAT—Double lilac lavender, blush.
- BOUFFANT—Single white, rosepink sepals.
- BUTTERFLY—Single rose bengal and crimson.
- CASCADE—Single rose pink, rose red sepals.
- CHEROKEE (1955) Double rose purple, pink sepals.
- MINIMUM SHIPMENT 6 PLANTS

- GOLDEN MARINKA (1955)—Single red, variegated foliage.
- JACK SHAHAN—Pale rose bengal.
- **LILIBET** Double soft rose, white sepals.
- MARINKA—Single all red.
- MILLIONAIRE (1955)—Double violet purple, rose red sepals.
- MISS CALIFORNIA Semi-double white, pink glow inside corolla.
- MOONLIGHT—Flesh pink veined rose, greenish white sepals.
- MOTH BLUE—Double deep lilac blue, deep red sepals.
- PLUM GLORY (1955)—Double purple, carmine sepals.
- **POTENTATE** Double rose crimson, carmine sepals.
- PURPLE NIGHT (1955) Double deep royal purple marbled, with white and phlox pink, white sepals flushed pink.
  - Price from 2½-inch pots 65c each

- RED SPIDER—Single rose red, dark crimson sepals.
- SAN MATEO—Huge double violet, pink sepals.
- SAN PABLO—Double pink lilac, rose pink sepals.
- SOUTH GATE—Double pale pink, pink sepals.
- so BIG (1955)—Double creamy white with long upturned sepals of pale pink which often measure five inches from tip to tip.
- SWEET SIXTEEN—Double deep pink, pink sepals.
- SWINGTIME Double white, red sepals.
- TRAIL BLAZER Double red, red sepals.
- TUMBLING WATERS—Double purple, crimson sepals.
- VAGABOND Double magenta, carmine sepals.

The Calla Lily will grow in all types of soil; however, a well-drained, sandy loam is preferred. Heavy soils may be improved by applying leaf mold or sandy loam.

Summer-blooming Calla lilies should be planted as early as one's locality will permit in the spring. Winter-flowering Callas may be planted in the fall or early spring in severe climates.

The bulbs may remain in the ground for three years. They should then be dug and separated. In areas of severe winters, it is well to cover the ground thoroughly with a good mulch, or dig them each season when the plant has become dormant.

## REX BEGONIAS

The Rex Begonia with their exotic leaf colorings, ranging in shades from silver to almost black, are deserving of being called "King of Begonias."

They are easy to grow and do well in the darker locations of your shade garden or conservatory. Soil and feeding requirements the same as the tuberous variety.

ASSORTED COLORS—Seedling Plants.
